

April 28, 2009

Dear Pelham Parents:

As you know there have been concerns raised about a potential pandemic due to the outbreak of “swine flu” in Mexico and now reported in several countries including the United States. As of April 27, 2009, Centers for Disease Control and Prevention (CDC) is reporting 40 confirmed cases within the US. **At present, there are no reported cases of swine influenza in New Hampshire (NH).** This letter will provide you with specific and pertinent information regarding both prevention and intervention as a family and as a school district. Please also understand that this letter is written in direct response and according to guidelines received in recent communiqués from the Center for Disease Control (CDC).

This strain of swine influenza is making people sick with the same symptoms as the seasonal flu: fever, chills, sore throat, cough, headache and body aches (sometimes nausea, vomiting and diarrhea). It also appears that this new swine influenza can be spread from person to person. You may have concerns, that this swine influenza virus has caused illness and death in some people in Mexico. It’s important for you to know that most people who have gotten sick in the United States have had very mild illness. However, this situation is evolving and the CDC expects that more cases will be identified.

If you or your children have traveled to Mexico in the last 7-10 days please let the Superintendent’s Office know immediately: 425-1976 or [scad@windhamsd.org](mailto:scad@windhamsd.org). We will inform the Principal and School Nurse in your child’s school and monitor their situation very carefully. If we should discover that your child is exhibiting flu like symptoms, we will contact you immediately and ask that you keep your child home until such time that the symptoms have subsided, and we also ask that you contact your health care provider immediately.

We wish to do all we can to try to prevent transmission within NH and within our schools, and therefore, please read the following guidelines and suggestions from the CDC very carefully:

**Actions you can and should take —**

- **If you or your child has recently returned from an affected geographic area,** monitor for symptoms of influenza for seven days after returning. If symptoms occur, call your healthcare provider for evaluation (be sure to mention your recent travel history). The school nurse will also screen for symptoms for a period of seven days.
- **If you or your child is sick, stay home from work or school until you are better.** Keep sick people away from people who are not sick.
- **Tell your school nurse** or administrator about your child’s symptoms so they can watch for other students with the same symptoms.
- **Wash your hands well and often.** Make sure your children do the same. Wash with soap and water for at least 20 seconds.

- **If you can't wash with soap and water**, use a hand sanitizer. (Gels, rubs or hand wipes with at least 60% alcohol)
- **Remind children** to keep their hands away from their face – don't touch mouth, nose, or eyes.
- **Cover your cough.** Teach your children to do the same. Cough into the inside of your elbow, or into a tissue — not your hands!
- **Throw away used tissues** or hand sanitizer wipes. Teach your children to throw away tissues and then wash hands.
- **Don't share** water bottles, utensils, cups, food, etc. with others.
- **If people in your home are sick** with the flu and cannot see a healthcare provider, care for them at home — Give plenty of liquids (clear fluids with electrolytes). If you are unsure what over-the-counter medications can be safely used to reduce symptoms, if the ill person is having difficulty breathing, or if they are getting worse, call your healthcare provider.
- **You can disinfect hard surfaces** in your home with a solution made of one ounce bleach to one gallon of water.

**For now, school will stay open** — At this time, the NH Department of Health and Human Services tells us that students who are not ill can safely come to school, even students with history of travel to affected geographic areas as long as they don't have symptoms.

If the swine flu continues to spread in the U.S. and if it causes severe illness, closing of schools may be considered. The purpose of closing schools is to slow the spread of flu from person-to-person by keeping children at home and away from others.

**If you have questions**, call your school nurse or your healthcare provider.
